

Tatildekirala's Migration Journey with Google Cloud

NGC played a key role in this project, offering comprehensive support across all Sales, Service, and Support functions to ensure a seamless transition and optimal results.

The challenge

The existing infrastructure's inability to scale resources efficiently resulted in performance bottlenecks, slow response times, and decreased productivity, hindering both business operations and customer experiences.

The solution

A robust and secure infrastructure was implemented, with the test environment isolated in its own project. The customer leveraged key Google Cloud products like Google Kubernetes Engine and Compute Engine to meet their needs. The migration was guided by the Google Cloud Architecture Framework, ensuring a smooth transition to the cloud.

The result

Our team provided the customer with a cutting-edge system designed for scalability, stability, and superior performance within a microservice architecture. This robust framework empowers them to meet their evolving business needs.

As Tatildekirala team, we are using GCP infrastructure for a 1 year. With this work we were able to create the fastest and most reliable system with minimum costs. Google Cloud's powerful tools have been instrumental in helping us solve our scalability and reliability challenges, and it has allowed us to provide a better experience for our users. In this regard I would like to thank the NGC company.

About tatildekirala

TatildeKiralA is a rapidly growing online platform for villa and boat rentals in Turkey, founded in 2018. They aim to improve people's vacation experiences and provide them with the comfort of a home away from home.

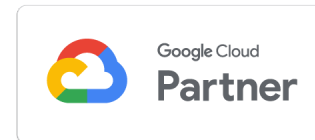

Vertical/horizontal solution: Software & Internet

Primary project location: Turkey
